## *IPT Connect DATASHEET*

THE HIGH-CAPACITY MOBILE APPLICATION FOR TRADERS

A part of **BT** 

### Solution Overview

IPT Connect provides traders with a portable, high-capacity communications application that can run on smartphones, tablets or PC's using an HTML 5 compatible browser. The software application runs virtually on any device and enables the user to easily visualize and prioritize multiple streams of telephony communications, ringdowns and hoots from anywhere and to monitor and participate in full duplex conversations when being off the floor.

The software solution requires also 2 telephony capable devices that it pilots to provide one handset and 5 speaker channels capability. Typically softphones installed on the same device or wired or wireless phones can be used to be called back by the central system of the trading floor.

## KEY CAPABILITIES

One-Touch access to multiple telephony channels

Simple, cost-effective soft client application that runs on any HTML 5 capable device

Extends complex trader voice communications to mobile and remote users

Line-sharing, barge-in, multi-level conferencing capability

Compliance through central in-house voice recording

IPT Connect offers a concentrated set of key trading capabilities including access to telephony and trader voice, multiple line appearances, rollover/pickup groups, call queues, barge-in and the ability to participate in multiparty ad hoc conferences with the trading floor. IPT Connect monitors up to five channels simultaneously.

The IPT Connect application addresses key business requirements including: simple, inexpensive licensing, massive scalability, rapid deployment, survivability and disaster recovery, security policy, communications with trading floors or back office personnel as long as integration with unified communications, voice recording platforms and applications.
